

Create Your Own API Script

We have included a blank API script for you to develop with. Duplicate it unlimited times to perform unlimited tasks. The blank template is located here: /API/scripts/idevaffiliate_api.php

You might consider running this API script via CRON, cURL or even in a web browser. When calling the file, you'll need to pass the "secret" argument in the URL.

Example, if your secret number is 4556764324, you'll need to call this file like this:
http://www.yoursite.com/idevaffiliate/API/idevaffiliate_api.php?secret=4556764324

You can find your secret key by logging into your iDevAffiliate admin center. In the upper right section of the main page, click on **System Information**. The secret key is located on this page.

Support

Support for this feature is very limited. We always try to help as much as possible by giving definitions of the database tables and fields but for us to actually write these functions for you is very rare. We simply have too many customers to support and have very little time to work on customizations. We can certainly recommend qualified PHP developers that are familiar with iDevAffiliate to help you with these custom functions.

If you have any questions, please do not hesitate to open a support ticket at <http://www.idevsupport.com>.
