

Using Multiple Payout Levels

Using multiple payout levels are a great way to rewards affiliates who produce greater amounts of sales for you. You can set up to 100 payout levels for each of the 3 payout styles and increase payout levels manually or have iDevAffiliate do it for you by using the **Performance Rewards** feature.

Affiliates will always default into Level 1 of the assigned payout style.

If you do not opt to use the **Performance Rewards** feature, you can use utilize multiple payout levels in different ways. For example, let's say you have two affiliates, one of which you'd like to pay 10% and the other 15% of each sale.

Commission Settings For Pay-Per-Sale (Percentage)			
Approve New Commissions?	Yes <input type="button" value="v"/>	<input type="button" value="Update"/>	
Payout Level 1	25 Affiliates Exist On This Level	10 %	<input type="button" value="Edit"/>
Payout Level 2	0 Affiliates Exist On This Level	15 %	<input type="button" value="Edit"/>
Payout Level 3	1 Affiliates Exist On This Level	20 %	<input type="button" value="Edit"/>

Simply adjust each account accordingly by editing the account and choosing which payout level you want for the affiliate. Your payout levels must be defined in your **Commission Settings** before doing this of course.

You can do this by editing the account.

Edit Commission Style	
Commission Style	Pay-Per-Sale (Percentage) <input type="button" value="v"/>
Payout Level	Level: 1 - 10% <input type="button" value="v"/>

If you opt to have iDevAffiliate increase payout levels automatically, use the **Performance Rewards** feature and determine whether or not you want payout levels increased based on the number of sales or amount of commission generated. iDevAffiliate will check current statistics for either option each time an approved sale comes in from the affiliate. The reward is granted instantly.
